EXP 3:

Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS

Aim

To design and implement a **cloud-based SaaS application** for property buying and rental in Chennai using a cloud platform like Amazon Web Services or Google Cloud Platform, enabling users to search, list, and book properties online.

Algorithm

Algorithm: Property Booking System

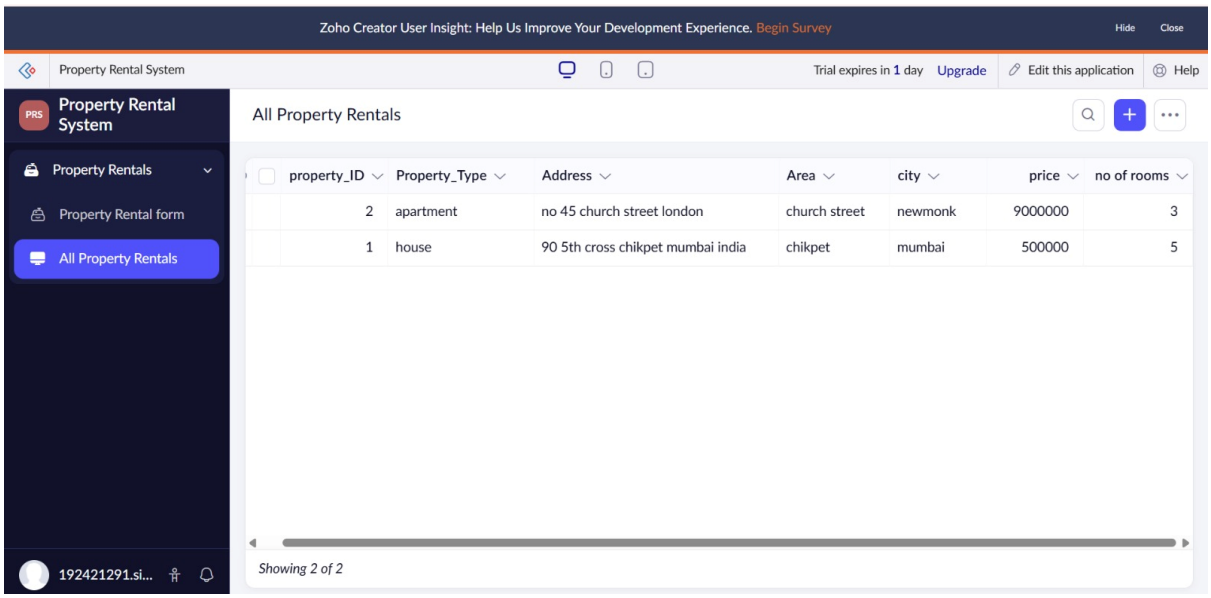
1. Start
2. User registers/login
3. Display property listings (location, price, type)
4. User searches/filter (e.g., Chennai areas like T. Nagar, Velachery)
5. User selects property
6. Check availability
7. If available → proceed to booking
8. Store booking details in cloud database
9. Send confirmation (email/SMS)
10. End

Procedure

1. **Choose Cloud Provider**
   Use Amazon Web Services (AWS) or Microsoft Azure
2. **Frontend Development**
   - HTML, CSS, JavaScript (or React)
   - Pages: Home, Search, Property Details, Booking
3. **Backend Setup**
   - Use Node.js / Python (Flask/Django)
   - Handle login, search, booking logic
4. **Database (Cloud Storage)**
   - AWS DynamoDB / Firebase
   - Store user data, property details
5. **Cloud Hosting**
   - AWS EC2 / Firebase Hosting
   - Deploy application online
6. **Add SaaS Features**
   - Multi-user access
   - Subscription or pay-per-use
   - Admin dashboard to manage properties
7. **Testing**
   - Check booking flow

- Validate search filters

OUTPUT:



Result

A **cloud-based SaaS application** is successfully developed where users in Chennai can:

- Search properties
- Book rentals or buy properties
- Access system anytime via internet
