EXP 4: Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

Aim

To develop a **cloud-based SaaS car booking system** that allows users to reserve vehicles online using cloud services like Amazon Web Services or Google Cloud Platform.

Algorithm

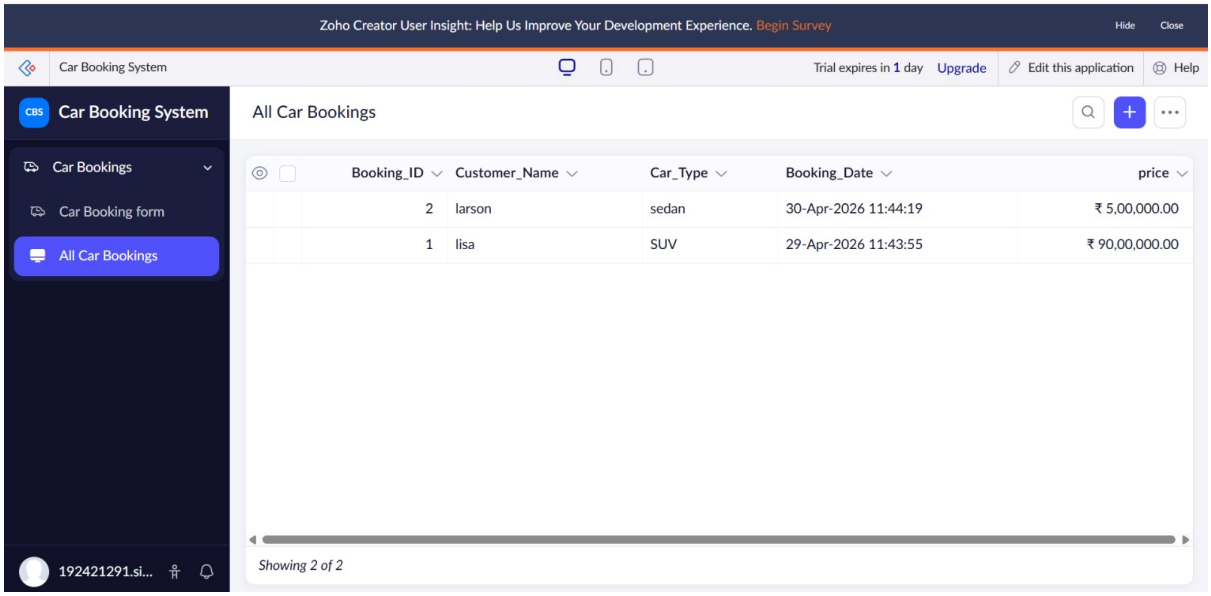
Algorithm: Car Reservation System

1. Start
2. User login/register
3. Display available cars
4. User selects car + date/time
5. Check availability
6. If available → confirm booking
7. Store booking in cloud database
8. Generate booking ID
9. Send confirmation notification
10. End

Procedure

1. **Select Cloud Platform**
    - Amazon Web Services / Microsoft Azure
2. **Frontend Development**
    - UI for car listing, booking form
    - Technologies: HTML, CSS, JS
3. **Backend Development**
    - Node.js / Java / Python
    - APIs for booking and availability
4. **Database Setup**
    - Cloud database (Firebase / AWS RDS)
    - Store cars, users, bookings
5. **Deployment**
    - Host on AWS EC2 / Azure App Service
6. **SaaS Implementation**
    - Multiple users access
    - Subscription model or usage-based billing
7. **Testing**
    - Validate booking conflicts
    - Ensure real-time availability

OUTPUT:



Result

A **cloud-based SaaS car reservation system** is implemented where users can:

- View available cars
- Book vehicles online
- Access system from anywhere
